Driver safety and peace of mind

Advanced Vehicle Management (AVM) services are built to keep your drivers safe, give them peace of mind and reduce your unscheduled maintenance costs.

At Fleetcare, we place a high level of importance on driver safety, so we've included AVM free of charge for all Fleetcare clients who have a telematics device installed in their vehicle.

Advanced telematics technology

Using advanced telematics technology, AVM alerts your drivers and provides assistance when the telematics unit in the vehicle detects one of the following incidents:

- * Low Battery
- * Diagnostic Trouble Code (DTC)
- * Crash
- * Towing

When an incident occurs, an alert is sent to the driver via SMS or email, containing helpful information to assist the driver at the time of the incident.

This allows your drivers to act quickly, follow appropriate steps and prevent any further damage or related incidents from occurring. In some instances, our client services team will also be in contact following the incident to follow up and ensure the appropriate steps have been taken.

Benefits you'll enjoy

Reduce unscheduled downtime and maintenance costs

When a vehicle's battery falls below 11.8V, an engine trouble code appears or the vehicle appears to have been towed, we'll notify your driver. By detecting these incidents early, the issue can be quickly handled, reducing vehicle and staff downtime.

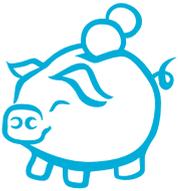

You'll also save money on unscheduled maintenance costs by being able to quickly remedy maintenance issues before they escalate.

Peace of mind and improved OH&S compliance

When an incident occurs, you can rest easy knowing that we've contacted your driver to provide information on what to do, who to contact, what details to collect at the scene, and most importantly – ensure they're safe.

A crash notification will automatically trigger our crash management process, improving your OH&S compliance.

Vehicle performance monitoring

Ensure your fleet is performing at its absolute best.

We'll notify your driver of any vehicle error codes that appear, and advise the appropriate action to take to have your fleet vehicle running smoothly, all before it starts impacting your bottom line.

Protect your assets

Automated alerts of a towing event allow drivers to take action quickly to locate the vehicle or rectify the incident.

For those clients with telematics location services switched on, we'll also be able to track the location of the asset, improving security should the vehicle have been stolen.

AVM is offered free of charge for all Fleetcare clients who have a telematics device installed in their vehicle.

To get started with telematics for your fleet, contact us today.
